Tormented Voices Thomas N. Bisson, 1998 Peasants of remote history rarely speak to us in their own voices, but Thomas Bisson's engagement with the records of several hundred twelfth-century rural Catalonians enables us to hear these voices. Bisson describes these peasants socially and culturally, showing how their experience figured in a wider crisis of power during the twelfth century.

Poly(Ethylene Terephthalate) Based Blends, Composites and Nanocomposites P.M. Visakh, Mong

Liang, 2015-08-24 Poly(Ethylene Terephthalate) (PET) is an industrially important material which is not treated specifically in any other book. Poly(Ethylene Terephthalate) Based Blends, Composites and Nanocomposites fills this gap and systematically guides the reader through all aspects of PET and its blends, composites and nanocomposites. It covers theoretical fundamentals, nanocomposites preparation, modification techniques, structure-property relationships, characterisation of the different blends and composites, and material choice for specific applications. Consisting of contributions from experts in the field this book is a useful reference for the researchers and engineers working on the development and characterization of PET materials as well as on implementing them in real-world products. It can also be used as a standard reference for deeper insight in the mechanical, thermal, thermo-mechanical and visco-elastic aspects in product design decisions. Provides a systematic overview on all types of poly(ethylene) terephthalate (PET) based blends, composites and nanocomposites Informs about characterization, structure-property relationships and types of modifications Links material properties to specific applications, enabling engineers to make the best material choice to increase product performance and cost efficiency, in industries ranging from aerospace to energy

Brain Renaissance Marco Catani,Stefano Sandrone,2015-04-06 Brain Renaissance: From Vesalius to Modern Neuroscience is published on the 500th anniversary of the birth and the 450th anniversary of the death of Vesalius. The authors translated those Latin chapters of the Fabrica dedicated to the brain, a milestone in the history of neuroscience. Many chapters are accompanied by a commentary tracking the discoveries that paved the way to our modern understanding of the brain - from the pineal gland that regulates sleep, the fornix and mammillary bodies for memory, the colliculi for auditory and visual perception, and the cerebellum for motor control, to the corpus callosum for interhemispheric cross-talk, the neural correlates of senses, and the methods for dissections. The chapters constitute a primer for those interested in the brain and history of neuroscience. The translation, written with modern anatomical terminology in mind, provides direct access to Vesalius' original work on the brain. Those interested in reading the words of the Renaissance master will find the book an invaluable addition to their Vesalian collection. Brain Renaissance pays a tribute to the work of the pioneers of neuroscience and to the lives of those with brain disorders, through whose suffering most discoveries are made. It's an unforgettable journey inspired by the work of the great anatomist, whose words still resonate today.

Animal Encounters Tom Tyler,Manuela S. Rossini,2009 The fast-growing field of Animal Studies is a varied and much contested domain. Engagement with animals has encouraged both collaboration and conflict between researchers within the arts, humanities, and social sciences. Animal Encounters comprises a series of meetings not only between diverse beasts, but also between distinct disciplinary methods, theoretical approaches, and ethical positions. The essays here collected come together from literary and cultural studies, sociology and anthropology, ecocriticism and art history, philosophy and feminism, science and technology studies, history and posthumanism, to study that most familiar and most foreign of creatures, a ~the animala (TM). These encounters between leading practitioners in the field highlight the promise and potential of interspecies exchange and mutual provocation.

Five Steps to the Perfect Pet Mike Deathe Cpdt-Ka,2013-11 Over the past several years, I found there were five articles

from my blog that became more and more popular. These five got more views, comments and results than any of my other articles. In fact, my first session with clients often focused on these five topics as a way to jump-start training and leadership not to mention helping with owner frustration. I even started carrying copies of these articles in my car to give clients after our sessions. Then, one day, a client made two observations that have stuck with me, and been repeated by a few others as well: You know, everything you just taught me is really nothing more than common sense and I really should have been able to figure this out on my own . . . AND Why on earth have you not put these ideas into a book? Well, that was about three years ago, during that time, we finished up our book on potty training - The Dog Owner's Book of Poop and Pee - and also released a book for shelter volunteers called Forever Home . . . Dog Training 101 & How to be a Better Shelter Volunteer . Instead of taking a break and enjoying the fact that both were done, I instead sit here with the final draft of Five Steps to the Perfect Pet in my hand ...I hope it helps you as much as it did the clients that inspired me to write it! Molecular Imaging of Small Animals Habib Zaidi, 2014-05-27 This book examines the fundamental concepts of multimodality small-animal molecular imaging technologies and their numerous applications in biomedical research. Driven primarily by the widespread availability of various small-animal models of human diseases replicating accurately biological and biochemical processes in vivo, this is a relatively new yet rapidly expanding field that has excellent potential to become a powerful tool in biomedical research and drug development. In addition to being a powerful clinical tool, a number of imaging modalities including but not limited to CT, MRI, SPECT and PET are also used in small laboratory animal research to visualize and track certain molecular processes associated with diseases such as cancer, heart disease and neurological disorders in living small animal models of disease. In vivo small-animal imaging is playing a pivotal role in the scientific research paradigm enabling to understand human molecular biology and pathophysiology using, for instance, genetically engineered mice with spontaneous diseases that closely mimic human diseases.
