Canine Ergonomics William S. Helton, 2009-04-28 Since *Canis lupus familiaris* first shared a fire with man more than 15,000 years ago, dogs have been trusted and valued coworkers. As with many new fields, the literature on working dogs is scattered across several non-overlapping disci

The Mycotoxin Blue Book Duarte Diaz, 2005-01-01 Moulds and the mycotoxins they produce, have a wide-ranging economic impact on animal agriculture on every continent of the globe. Mould growth robs feed nutritive value and reduces intake, which lowers efficiency. Mycotoxins, even when present at levels previously considered 'trace', have negative effects on performance and health, particularly in the context of today's more highly productive modern livestock genetics. Food-borne toxins also threaten human health through contaminated cereal and protein sources and transfer of toxins in food animal products. *The Mycotoxin Blue Book* focuses on the physiological effects and field occurrence of mycotoxins. Detailed information on types of moulds and mycotoxins and the conditions under which moulds flourish is included. Implications of mycotoxin contamination of feedstuffs for all major food animal species are presented in addition to aquaculture and companion animals. Sampling and analytical issues are covered in depth; as is the topic of mycotoxins in human foods. Finally, practical means of ameliorating mycotoxin effects are addressed. It is the hope of the editor and authors that the material herein will lead to clearer recognition of mycotoxin problems and ultimately to ways of reducing their impact on food animal production. An excellent guide for nutritionists, advisors, farmers and students involved with and using animal feed. Contents: Sampling feeds for mycotoxin analysis Mycotoxins: their effects in poultry and some practical solutions Effects of mycotoxins in horses Effects of mycotoxins on domestic pet species Effects of mycotoxins on antioxidant status and immunity Mycotoxins in aquaculture Principles and applications of mycotoxin analysis Mycotoxins in the human food chain Mould growth and mycotoxin production Current concepts in mycotoxicoses in swine Mycotoxins in forages Mycotoxin interactions Mycotoxins: metabolism, mechanisms and biochemical markers Effects of mycotoxins in ruminants Mycotoxin sequestering agents: practical tools for the neutralisation of mycotoxins Index

Veterinary Cytology Leslie C. Sharkey, M. Judith Radin, Davis Seelig, 2020-08-04 This book offers a state-of-the-art, evidence-based reference to all aspects of veterinary cytology. Truly multidisciplinary in its approach, chapters are written by experts in fields ranging from clinical pathology to internal medicine, surgery, ophthalmology, and dermatology, drawing the various specialties together to create a comprehensive picture of cytology's role in diagnosis and treatment of animal disease.

Firmly grounded in the primary literature, the book focuses on companion animals, with special chapters for species with fewer publications. Chapters are logically organized by body system, with additional chapters on tumors of particular import and diagnostic decision making. The first two sections of Veterinary Cytology focus on cytology techniques, quality control, and special laboratory techniques. Subsequent sections are organ/tissue-based and reflect what is known about the canine, feline, and equine species. This is followed by chapters on non-traditional species, including exotic companion mammals, rabbits, cattle, camelids, non-human primates, reptiles and birds, amphibians, fish, invertebrates, and sheep and goats. The last section highlights some unique features of the applications of cytology in industry settings. Provides a gold-standard reference to data-driven information about cytologic analysis in companion animal species Brings together authors from a wide range of specialties to present a thorough survey of cytology's use in veterinary medicine Offers broader species coverage and greater depth than any cytology reference currently available Veterinary Cytology is an essential resource for clinical and anatomic pathologists and any specialist in areas using cytology, including veterinary oncologists, criticalists, surgeons, ophthalmologists, dermatologists, and internists.

BSAVA Manual of Small Animal Ophthalmology Simon M. Peterson-Jones, Sheila M. Crispin, 2002-10-11 This new Manual builds on the success of the first edition of the *BSAVA Manual of Small Animal Ophthalmology*. This new edition begins with a clear and concise guide to the examination of the eye. Using the techniques described and the lists of differential diagnoses provided in Appendix I, it should be possible for ocular lesions to be identified and localized with precision. Chapters on imaging techniques (radiography, ultrasonography, CT and MRI) and laboratory investigations follow. New to this edition are chapters on anaesthesia and surgery. Basic principles such as tissue separation and suturing are described and illustrated with specially commissioned drawings. Ocular conditions of dogs and cats are covered in chapters on specific regions, progressing from the adnexa (orbit and periorbital regions, eyelids and lacrimal system) to the eye itself, and thence to the connections between the eye and the brain. Each chapter starts with a short section that considers the

relevant anatomy and physiology of that portion of the eye. Following a consideration of diagnostic tests, clinical features are described and illustrated by a wealth of high-quality full-colour images. Medical and surgical management are then discussed for each condition. Conditions of the dog and cat are mostly considered separately, except where there are close similarities. The last two chapters of the Manual briefly describe ocular conditions of rabbits and exotic species (primates, rodents, birds, reptiles and fish), with emphasis on the commoner disorders and those that differ markedly from the conditions already described for the dog and cat. The Manual is a practical consulting room guide to small animal ophthalmology, but there is sufficient detail to satisfy those who wish to study this fascinating specialty in greater depth. The Exploitation of Mammal Populations V.J. Taylor, N. Dunstone, 1996-08-31 Human exploitation of other mammals has passed through three historical phases, distinct in their ecological significance though overlapping in time. Initially, Homo sapiens was a predator, particularly of herbivores but also of fur-bearing predators. From about 11 000 years ago, goats and sheep were domesticated in the Middle East, rapidly replacing gazelles and other game as the principal source of meat. The principal crops, including wheat and barley, were taken into agriculture at about the same time, and the resulting Neolithic farming culture spread slowly from there over the subsequent 10 500 years. In a few places such as Mexico, Peru and China, this Middle Eastern culture met and merged with agricultural traditions that had made a similar but independent transition. These agricultural traditions provided the essential support for the industrial revolution, and for a third phase of industrial exploitation of mammals. In this chapter, these themes are drawn out and their ecological significance is investigated. Some of the impacts of humans on other mammals require consideration on a world-wide basis, but the chapter concentrates, parochially, on Great Britain. What have been the ecological consequences of our exploitation of other mammals? 2. 2 HISTORICAL PHASES OF EXPLOITATION 2. 2. 1 Predatory man Our nearest relatives - chimpanzees, orang utans and gorillas - are essentially forest species, deriving most of their diet from the fruits of forest trees and the shoots and leaves of plants.

Wild Animals in Captivity H. Hediger, 2013-09-17 *Wild Animals in Captivity* covers some of the mistaken notions concerning the conditions of animals in captivity, most of which are the result of an anthropomorphic approach to the subject. This book is composed of 12 chapters and starts with an overview of the historical development of zoological gardens. The succeeding chapters deal with the territorial requirements and sociological factors in the wild life. These topics are followed by discussions of the wild animal's transition behavior from freedom to captivity; the physiological and psychological aspects of animal captivity; and the motive and situation of animal escapes. Other chapters emphasize the

physical and biological environment of animals in captivity. The final chapters examine the problems related to feeding patterns, and nutrition of captive animals. These chapters also explore the relationship between human and animal, their capacity to be tamed and trained. This book will prove useful to zoologists.
