The Book of Moods Lauren Martin,2020-12-08 The Happiness Project meets So Sad Today in this hilariously witty, unflinchingly honest book from Words of Women founder Lauren Martin, as she contemplates the nature of negative emotions -- and the insights that helped her to take control of her life (Bobbi Brown). Five years ago, Lauren Martin was sure something was wrong with her. She had a good job in New York, an apartment in Brooklyn, a boyfriend, yet every day she wrestled with feelings of inferiority, anxiety and irritability. It wasn't until a chance encounter with a (charming, successful) stranger who revealed that she also felt these things, that Lauren set out to better understand the hold that these moods had on her, how she could change them, and began to blog about the wisdom she uncovered. It quickly exploded into an international online community of women who felt like she did: lost, depressed, moody, and desirous of change. Inspired by her audience to press even deeper, The Book of Moods shares Lauren's journey to infuse her life with a sense of peace and stability. With observations that will resonate and inspire, she dives into the universal triggers every woman faces -- whether it's a comment from your mother, the relentless grind at your job, days when you wish the mirror had a Valencia filter, or all of the above. Blending cutting-edge science, timeless philosophy, witty anecdotes and effective forms of self-care, Martin has written a powerful, intimate, and incredibly relatable chronicle of transformation, proving that you really can turn your worst moods into your best life.

Climate Change and Renewable Energy Martin J. Bush, 2019-10-08 This book presents a comprehensive overview of the global climate change impacts caused by the continued use of fossil fuels, which results in enormous damage to the global environment, biodiversity, and human health. It argues that the key to a transition to a low carbon future is the rapid and large-scale deployment of renewable energy technologies in power generation, transport and industry, coupled with super energy-efficient building design and construction. However, the author also reveals how major oil companies and petrochemical conglomerates have systematically attempted to manufacture doubt and uncertainty about global warming and climate change, continue to block the commercialization of solar energy and wind power, and impede the electrification of the transport sector. Martin Bush's solution is a theory-of-change approach to substantially reduce greenhouse-gas emissions by 2050, which sets out realistic steps that people can take now to help make a difference.

Energy, Waste and the Environment R. Gieré, Peter Stille, 2004 This book provides incentives for further development of sustainable fuel cycles through a novel and interdisciplinary approach to an Earth science-related topic. The main focus is on geochemical concepts in immobilizing, isolating or neutralizing waste derived from energy production and consumption. The book also addresses the issue of using some types of energy-derived waste as alternative raw materials. Moreover, it highlights research on how certain wastes can be used for energy production, an increasingly important aspect of modern integrated waste management strategies. The main objectives are to: (a) identify the most serious environmental problems related to various types of power generation and associated waste accumulation; (b) present strategies, based on natural analogue materials, for the immobilization of toxic and radioactive waste components through mineralogical barriers; (c) discuss modern procedures for reuse of waste or certain waste components; and (d) review the importance of geochemical modelling in describing and predicting the interaction between waste and the environment.

Rapid Excavation and Tunneling Conference 2021 Proceedings Jarrett E. Carlson, Gregg W. Davidson, 2021-06-06

Every two years, industry leaders and practitioners from around the world gather at the Rapid Excavation and Tunneling Conference (RETC), the authoritative program for the tunneling profession, to learn about the most recent advances and breakthroughs in this unique field. The information presented helps professionals keep pace with the ever-changing and growing tunneling industry. This book includes the full text of 106 papers presented at the 2021 conference. Though the tunneling industry continues to develop both technically and contractually, one notable adaptation of the last two years has been the onset and management of COVID-19. The hallmarks of tunneling professionals include adaptability, resiliency, optimism, and management of change. These are traits that have been recently put to an entirely new challenge over the last year or so. We have truly witnessed why what we do is deemed “essential” infrastructure. The COVID-19 pandemic has impacted each of us, personally and professionally, and while times have been hard, we are fortunate to work in a field that is able to meet the challenge and thrive thereafter. Congratulations are in order to everyone in our industry for keeping the planning and development of projects moving forward and for maintaining safe and productive worksites in these challenging

times.
